# LATEX support for Fedra Sans Pro

# Michael Ummels

v1.0 - 2015/12/20

#### Abstract

This document describes the fedrasans package, which provides LATEX support for the commercial Fedra Sans Pro fonts in both text and math mode.

## 1 Overview

The fedrasans package provides LATEX support for the commercial Fedra® Sans Pro fonts¹ from Typotheque². You can load this package by adding

\usepackage[\langle options \rangle] \langle fedrasans \rangle

to the preamble of your document. If no options are specified, this will change the default sans-serif font to Fedra Sans Pro; use the option alt to select Fedra Sans Alt Pro. In order to use Fedra Sans as the main font for the document (not only when \sffamily is selected), you can use the option sfdefault. For all available options, see Section 3.

### Acknowledgements

See the acknowledgements for the fedraserif package, on which this package is based.

# 2 Interferences with other packages

In order to use Fedra Sans as a math font, you need to have the fdsymbol package (version 0.7 or higher) installed. Apart from fdsymbol, the fedrasans package automatically loads the packages textcomp and (if math support is enabled) amsmath. Additionally, the fontaxes package is loaded if it is present in your LATEX installation. If you want to

<sup>&</sup>lt;sup>1</sup>Fedra is a registered trademark of Typotheque VOF.

Table 1: Summary of options

| Key           | Values                 | Section |
|---------------|------------------------|---------|
| alt           | true, false*           | 4.1     |
| boldweight    | Medium*, Bold, auto    | 4.3     |
| fedrabb       | true, false*           | 5.3     |
| footnotemarks | true, false*           | 4.6     |
| figures       | lining*(lf), text(osf) | 4.5     |
| math-style    | tex*, iso, french      | 5.1     |
| math          | true, false*           | 5       |
| normalweight  | Book*, Demi, auto      | 4.3     |
| sfdefault     | true, false*           |         |
| stdmathdigits | true, false*           | 5.2     |

pass options to these packages, you can either load these packages beforehand, or you can include the options in the \documentclass command. If the math option is used, the fedrasans package is *not* compatible with amssymb and amsfonts (since fdsymbol is not).

# 3 Options

All package options are set using a  $\langle key \rangle = \langle value \rangle$  syntax. Boolean options accept true and false as values, and setting a Boolean key without a value is equivalent to setting it to true. Table 1 lists all option keys of the fedrasans package with their possible values; values that are marked with an asterisk correspond to the default behaviour of the package.

# 4 Font selection

#### 4.1 Variants

Fedra Sans Pro comes in two variants: the alternative variant (Fedra Sans Alt Pro) shown here is a bit more conservative than the original variant, which has a lowercase f that extends under the baseline and dots that look like diamonds, to name a few of its features. By default, the package use the original variant. If you prefer the alternative variant, you can select it by passing the option alt.

Table 2: Summary of font weights

| Series | Example                                    |
|--------|--------------------------------------------|
| 1      | A Quick Brown Fox Jumps Over The Lazy Dog. |
| sl     | A Quick Brown Fox Jumps Over The Lazy Dog. |
| md     | A Quick Brown Fox Jumps Over The Lazy Dog. |
| sb     | A Quick Brown Fox Jumps Over The Lazy Dog. |
| ub     | A Quick Brown Fox Jumps Over The Lazy Dog. |
|        | l<br>sl<br>md<br>sb                        |

### 4.2 Encodings

The package currently supports the OTI, TI, LYI, QX and T5 encodings for typesetting text with Latin characters, as well as the TSI encoding for typesetting text symbols. For typesetting text with accented characters, it is strongly recommended to change the default font encoding from OTI to TI or one of the other encodings. This can be achieved by putting \usepackage[T1]{fontenc} in the preamble of your document.

### 4.3 Weights

All fonts of the Fedra Sans Pro family come in five weights, which are (in increasing order) Light, Book, Demi, Medium and Bold, shown in Table 2. Of these, Book and Demi can be used as the standard text font, while Medium and Bold can be used for bold text. The option keys normalweight and boldweight allow to control which weights are used for the standard LATEX font series m and b (or bx), selected by \mdseries and \bfseries, respectively. For example, to use the Demi weight as the standard text font, use the option normalweight=Demi. By default, only the Book and the Medium weights are used. Additionally, both keys can be set to the value auto, which selects a weight depending on the font size (Book and Medium for normal and large sizes, Demi and Bold for small sizes). Independently of these options, all weights can accessed using \fontseries. For instance, the Light weight can be accessed using the command \fontseries{1}.

### 4.4 Shapes

In addition to the normal small caps shapes sc and scit, there are letterspaced versions ssc and sscit (see Table 3).

If the fontaxes package is available, you can use the commands \sscshape and \textssc{\text}} to switch to letterspaced small caps.

Table 3: Summary of font shapes

| Shape | Example                                    |
|-------|--------------------------------------------|
| n     | A Quick Brown Fox Jumps Over The Lazy Dog. |
| it    | A Quick Brown Fox Jumps Over The Lazy Dog. |
| sc    | A Quick Brown Fox Jumps Over The Lazy Dog. |
| SSC   | A QUICK BROWN FOX JUMPS OVER THE LAZY DOG. |
| scit  | A Quick Brown Fox Jumps Over The Lazy Dog. |
| sscit | A Quick Brown Fox Jumps Over The Lazy Dog. |
|       |                                            |

Table 4: Summary of figure versions

|              | Lining figures | Text figures |
|--------------|----------------|--------------|
| Proportional | 0123456789     | 0123456789   |
| Tabular      | 0123456789     | 0123456789   |

# 4.5 Figures

Fedra Sans Pro offers four main figure versions (see 4). On the one hand, one can choose between *lining figures* and *text figures*, also known as *old-style figures*. On the other hand, one can choose between *proportional figures* and *tabular figures*.

By default, proportional lining figures are used throughout the document. If you want to use text figures instead, use the option figures=text or figures=osf.

Assuming that the fontaxes package is installed on your system, you can use the command \figureversion to switch between different figure versions inside the document. Possible arguments are text or osf for text figures, lining or lf for lining figures, tabular or tab for tabular figures, and proportional or prop for proportional figures. Note that you can combine several arguments. For example, the command \figureversion{osf, tabular} selects tabular text figures.

Small and slanted fractions are fractions with a height matching the font's body size; they can be accessed via:

Note that only figures can be used for (numerator) and (denominator).

Finally, Fedra Sans Pro offers so-called bullet figures, which are enclosed by a circle; they can be accessed via:

```
\operatorname{openbullet}(\operatorname{number}) ① ② \operatorname{openbullet}(\operatorname{number}) ⑤ ⑤
```

As for small and slanted fractions, only figures can be used for  $\langle number \rangle$ .

Table 5: Dingbats available with the fedrasans package

| number | glyph         | number | glyph             | number | glyph      | number | glyph                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|        |               |        |                   |        |            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

#### 4.6 Footnotes

By setting the option footnotemarks, footnote marks are set using special characters designed for this purpose, i.e.  $^{1,a}$  instead of  $^{1,a}$ . However, this only works for footnote marks that consist of figures and the lowercase letters a-z.

# 4.7 Dingbats

Assuming that the pifont package is loaded, you can access Fedra Serif's ornamental characters via:

\Pisymbol{FedraSansPro-Pi}{\( number \) \}

The available glyphs are listed in Table 5.

## 4.8 Additional notes

Fedra Sans Pro implements a large subset of the glyphs made available by the TS1 encoding. However, the following glyphs are missing:

| \textdblhyphen      | \textlangle       | \textrangle        |
|---------------------|-------------------|--------------------|
| \textdivorced       | \textdied         | \textleaf          |
| \textmarried        | \textmusicalnote  | \textdblhyphenchar |
| \textdollaroldstyle | \textcentoldstyle | \textacutedbl      |
| \textgravedbl       | \textguarani      | \textrecipe        |
| \textpertenthousand | \textpilcrow      | \textbaht          |
| \textdiscount       | \textopenbullet   | \textlquill        |
| \textrquill         | \textcopyleft     | \textreferencemark |

In addition to the monetary symbols defined by the TS1 encoding, the following currency symbols are available:

| Œ   | \textcruzeiro | Fr | \textfranc  | ŋή | \textmill    |
|-----|---------------|----|-------------|----|--------------|
| Pts | \textpeseta   | Rs | \textrupee  | 回  | \textsheqel  |
| ĸ   | \textkip      | ₮  | \texttugrik | 줃  | \texthryvnia |

# 5 Math support

By default, we only change the math font to Fedra Sans Pro (with mathematical symbols taken from FdSymbol) if the option sfdefault has been selected. In order to allow for a more fine-grained control, you can enable or disable using the math option. Note that all other options described in this section only have an effect if math support is enabled.

#### 5.1 Letters

In T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X, uppercase Greek letters are traditionally set upright in math mode, even when they are used as variables. This differs from the ISO standards ISO31-0:1992 to ISO31-13:1992, which mandate italics in this case. While the package employs the T<sub>E</sub>X tradition by default, you can select the ISO behaviour by setting the option math-style=iso. Independently of this option, you can alyways select upright and italic greek letters using the commands \upalpha, \italpha, \upGamma, \itGamma, etc. Additionally, the math-style key can take the value french, in which case all Greek and uppercase roman letters are typeset upright. For an illustration of the differences between the three values for math-style, see Table 6.

The fedrasans package provides all letters available in math mode with the Computer Modern fonts, with the exception of \varpi and \varrho, which have the same shape as \pi and \rho, respectively. Additionally, the following letters and letter-like symbols are can be typeset:

Table 6: The different styles for letters in math mode

| math-style | example                                                                     |
|------------|-----------------------------------------------------------------------------|
| tex        | $a, b, \ldots, A, B, \ldots, a, \beta, \ldots, \Gamma, \Delta, \ldots$      |
| iso        | $a,b,\ldots,A,B,\ldots,a,\beta,\ldots,\Gamma,\Delta,\ldots$                 |
| french     | $a, b, \ldots, A, B, \ldots, \alpha, \beta, \ldots, \Gamma, \Delta, \ldots$ |

| в | \varbeta³        | f | \digamma³ | Э | \backepsilon³ |
|---|------------------|---|-----------|---|---------------|
| 3 | \varbackepsilon³ | ħ | \hslash   | λ | \lambdabar    |
| λ | \lambdaslash     | ð | \eth³     | 0 | \slashedzero  |
| Ω | \mho             | ł | \upell    | ħ | \uphbar       |

## 5.2 Digits

By default, digits in math mode are typeset in the default figure version for text mode (as selected by the figures key). To use lining figures in math mode even if figures=text is active, set the option stdmathdigits.

Apart from the standard math versions normal and bold, the package introduces two new math versions tabular and boldtabular, in which digits are typeset as tabular figures.

#### 5.3 Blackboard characters

If you also have the fedraserif package installed, you can use the option \mathbb to change the math blackboard alphabet to Fedra Serif. See the documentation of the fedraserif package for more information.

#### 6 NFSS classification

Table 7 lists all fonts made available with this package. Parenthesised combinations are provided via substitutions.

# 7 Implementation

## 7.1 Options

We use xkeyval's key mechanism to declare all options.

1 (\*package)

 $<sup>^3</sup>$ The shape of the symbol is different if the option math-style=french is selected. Upright and italic shapes are also available directly via the commands  $\sup(cmd)$  and  $\inf(cmd)$ , respectively.

Table 7: NFSS classification

| Encoding                        | Family                                                                           | Series                          | Shape                                                 |

# Font selection

11 \newif\iffdrss@math
12 \fdrss@mathfalse

The package fedrasans-fd adapts the font definitions to the requested font set (see Section 9). So we simply pass on the relevant options. Additional care has to be taken to pass the right options to fdsymbol.

```
13 \fdrss@boolkey{alt}{%
14  \PassOptionsToPackage{alt=#1}{fedrasans-fd}%
15 }
16 \fdrss@choicekey{normalweight}{book,demi,auto}{%
17  \PassOptionsToPackage{normalweight=#1}{fedrasans-fd}%
18  \ifcase\@tempb\relax
19  \PassOptionsToPackage{normalweight=book}{fdsymbol}%
```

```
\or
20
      \PassOptionsToPackage{normalweight=regular}{fdsymbol}%
21
22
      \PassOptionsToPackage{normalweight=auto}{fdsymbol}%
23
24
25 }
26 \fdrss@choicekey{boldweight}{medium,bold,auto}{%
    \PassOptionsToPackage{boldweight=#1}{fedrasans-fd}%
    \PassOptionsToPackage{boldweight=#1}{fdsymbol}%
29 }
The next option sets the default font to a sans-serif font.
30 \fdrss@boolkey{sfdefault}{%
31 \iffdrss@sfdefault\renewcommand{\familydefault}{\sfdefault}\fdrss@mathtrue\fi%
32 }
The next option toggles the math font setup.
33 \fdrss@boolkey{math}{%
34 \iffdrss@math\fdrss@mathtrue\else\fdrss@mathfalse\fi%
35 }

# 7.3 Math font setup

We use FdSymbol for most mathematical symbols.

```
172 \iffdrss@math
173 \RequirePackage[scale=0.9,opstyle=sans]{fdsymbol}[2011/11/01]
```

Some math symbols are taken from the text font by fdsymbol. Use the correct math figure version for these.

```
174 \renewcommand\fdsy@text[1]{%
175 \ifx\fdsy@bold\math@version
176 \text{\usefont{T1}{\fdrss@mathfamily}{b}{n}#1}%
177 \else
178 \text{\usefont{T1}{\fdrss@mathfamily}{m}{n}#1}%
179 \fi
180 }
```

Redefine the standard math versions normal and bold.

```
\DeclareSymbolFont{operators}{T1}{\fdrss@mathfamily}{m}{n}
```

- \lambda \SetSymbolFont{operators}{bold}{T1}{\fdrss@mathfamily}{b}{n}
- \DeclareSymbolFont{letters}{OML}{\fdrss@family-TOsF}{m}{\fdrss@mathshape}
- $\$  \SetSymbolFont{letters}{bold}{OML}{\fdrss@family-TOsF}{b}{\fdrss@mathshape}
- \lambda \DeclareMathAlphabet{\mathrm}{T1}{\fdrss@mathfamily}{m}{n}

```

# 9 Font definition support package

As all font definitions look the same, we introduce macros to ease the configuration. These macros are stored in the file fedrasans-fd.sty, which is included by every FD file. Since fedrasans-fd.sty will be included several times and we do not know in which context the code is executed, we have to define all non-private commands as globals and avoid all \preambleonly commands.

We add a guard so that this file is executed only once even if it is included multiple times.

```
562 (*fontdef)
563 \ifx\fdrss@variant\@undefined\else\endinput\fi
```

We distinguish between being loaded directly or via \usepackage in the preamble by

```
checking \@nodocument.
564 \ifx\@nodocument\relax\else
565 \NeedsTeXFormat{LaTeX2e}
566 \RequirePackage{xkeyval}
567 \fi
```

Reset \escapechar (which is set to -1 in FD files) to make \newcommand work. The additional group does not harm; we have to make the important commands global anyway.

```
568\ifx\@nodocument\relax
569 \begingroup
570 \escapechar'\\
571\fi
```

The macro to make commands global is taken from the otfontdef package.

```
572 \newcommand*\fdrss@makeglobal[1]{%
573 \global\expandafter\let\csname #1\expandafter\endcsname
574 \csname #1\endcsname
575 }
```

# 9.1 Options

These are the default values if it is impossible to process options.

```
576 \newcommand\fdrss@variant{}

624 \fdrss@makeglobal{fdrss@scale}
```

## 9.2 Font configuration

We define commands to write to and read from the configuration database.

```
625 \newcommand*{\fdrss@addconfig}[4][]{%
     \@for\@tempa:=#3\do{%
626
       \expandafter
627
       \gdef\csname fdrss@config@#2@#1@\@tempa\endcsname{#4}%
628
629
    }%
630 }
631 \newcommand*{\fdrss@useconfig}[3]{%
    \@ifundefined{fdrss@config@#2@#1@#3}{%
632
      \@ifundefined{fdrss@config@#2@@#3}{}%
633
634
        {\csname fdrss@config@#2@@#3\endcsname}%
     }{\csname fdrss@config@#2@#1@#3\endcsname}%
635
636 }
637 \fdrss@makeglobal{fdrss@useconfig}
```

```
Now we can build up the configuration database.
638 \fdrss@addconfig{weight/normal}{l}{Light}
639 \fdrss@addconfig{weight/small}{l}{Light}
640 \fdrss@addconfig{weight/normal}{sl}{Book}
641 \fdrss@addconfig{weight/small}{sl}{Book}
642 \fdrss@addconfig{weight/normal}{m}{\fdrss@mweight@normal}
643 \fdrss@addconfig{weight/small}{m}{\fdrss@mweight@small}
644 \fdrss@addconfig{weight/normal}{md}{Demi}
645 \fdrss@addconfig{weight/small}{md}{Demi}
646 \fdrss@addconfig{weight/normal}{sb}{Medium}
647 \fdrss@addconfig{weight/small}{sb}{Medium}
648 \fdrss@addconfig{weight/normal}{b}{\fdrss@bweight@normal}
649 \fdrss@addconfig{weight/small}{b}{\fdrss@bweight@small}
650 \fdrss@addconfig{weight/small}{ub}{Bold}
651 \fdrss@addconfig{weight/normal}{ub}{Bold}
652 \fdrss@addconfig{subs/series}{bx}{b}
653 \fdrss@addconfig{italic}{it,scit,sscit}{Italic}
654 \fdrss@addconfig[OML]{italic}{n}{French}
655 \fdrss@addconfig[OML]{italic}{it}{Mixed}
656 \fdrss@addconfig{shape}{sc,scit}{-sc}
657 \fdrss@addconfig{shape}{ssc,sscit}{-ssc}
658 \fdrss@addconfig{subs/shape}{sl}{it}
659 \fdrss@addconfig{subs/shape}{scsl}{scit}
660 \fdrss@addconfig{subs/shape}{sscsl}{sscit}
This is the main macro to declare a single font shape.
661 \newcommand*\DeclareFedraSansShape[4]{%
     \edef\@@tempa{\fdrss@useconfig{#1}{subs/series}{#3}}%
662
     \edef\@@tempb{\fdrss@useconfig{#1}{subs/shape}{#4}}%
663
     \ifx\@@tempa\empty\ifx\@@tempb\empty
664
       \DeclareFontShape{#1}{FedraSansPro-#2}{#3}{#4}{%
665
         <-7.1>s*[\fdrss@scale]%
666
           FedraSansAltPro-%
667
           \fdrss@useconfig{#1}{weight/small}{#3}%
668
           \fdrss@useconfig{#1}{italic}{#4}-#2%
669
           \fdrss@useconfig{#1}{shape}{#4}-#1%
670
         <7.1->s*[\fdrss@scale]%
671
           FedraSansAltPro-%
672
           \fdrss@useconfig{#1}{weight/normal}{#3}%
673
           \fdrss@useconfig{#1}{italic}{#4}-#2%
674
           \fdrss@useconfig{#1}{shape}{#4}-#1%
675
       }{}%
676
677
       \DeclareFontShape{#1}{FedraSansPro-#2}{#3}{#4}{%

680
       }{}%
```

```
\fi\else
681
       \DeclareFontShape{#1}{FedraSansPro-#2}{#3}{#4}{%
682
         <->ssub* FedraSansPro-#2/\@@tempa/#4%
683
684
       }{}%
    \fi
685
686 }
687 \fdrss@makeglobal{DeclareFedraSansShape}
Finally, we provide commands to declare a complete family.
688 \newcommand*\DeclareFedraSansFamily[4]{%
     \DeclareFontFamily{#1}{FedraSansPro-#2}{}%
     \@for\fdrss@series:=#3\do{%
690
       \@for\fdrss@shape:=#4\do{%
691
692
         \DeclareFedraSansShape{#1}{#2}{\fdrss@series}{\fdrss@shape}%
       }%
693
    }%
694
695 }
696 \fdrss@makeglobal{DeclareFedraSansFamily}
697 \newcommand*\DeclareFedraSansLargeFamily[2]{%
     \DeclareFedraSansFamily{#1}{#2}{1,s1,m,md,sb,b,bx,ub}%
698
       {n,it,sc,ssc,scit,sscit,sl,scsl,sscsl}%
699
700 }
701 \fdrss@makeglobal{DeclareFedraSansLargeFamily}
702 \newcommand*\DeclareFedraSansSmallFamily[2]{%
     \DeclareFedraSansFamily{#1}{#2}{1,sl,m,md,sb,b,bx,ub}{n,it,sl}%
704 }
705 \fdrss@makeglobal{DeclareFedraSansSmallFamily}
706 \newcommand*\DeclareFedraSansTinyFamily[2]{%
     \DeclareFedraSansFamily{#1}{#2}{1,sl,m,md,sb,b,bx,ub}{n}%
707
708 }
709 \fdrss@makeglobal{DeclareFedraSansTinyFamily}
710 \newcommand*\DeclareFedraSansMathFamily[1]{%
     \def\ensuremath{\def}\
711
     \def\@tempb{TOsF}%
     \DeclareFontFamily{OML}{FedraSansPro-#1}{\skewchar\font=127}%
713
     \@for\fdrss@series:=m,md,sb,b,bx,ub\do{%
714
       \ensuremath{\mbox{\sc defor\fdrss@shape:=n,it\do{\%}}}
715
         \ifx\@tempa\@tempb
716
           \DeclareFedraSansShape{OML}{TOsF}{\fdrss@series}{\fdrss@shape}%
717
         \else
718
         \DeclareFontShape{OML}{FedraSansPro-#1}{\fdrss@series}{\fdrss@shape}{%
719
             <->ssub* FedraSansPro-TOsF/\fdrss@series/\fdrss@shape
720
           }{}%
721
         \fi
722
       }%
723
    }%
724
```

```
725 }
726 \fdrss@makeglobal{DeclareFedraSansMathFamily}
```

We define font family aliases so that we can place all configurations for the FedraSansPro family variants into one microtype file: mt-FedraSansPro.cfg. We use microtype's hook if microtype has not been loaded yet (which should be the case); otherwise we can execute the alias definitions directly.

```
727 \gdef\fdrss@MicroType@Aliases{%
    \DeclareMicrotypeAlias{FedraSansPro-LF}{FedraSansPro}%
    \DeclareMicrotypeAlias{FedraSansPro-OsF}{FedraSansPro}%
729
    \DeclareMicrotypeAlias{FedraSansPro-TLF}{FedraSansPro}%
730
    \DeclareMicrotypeAlias{FedraSansPro-TOsF}{FedraSansPro}%
731
732 }
733 \@ifundefined{Microtype@Hook}{%
    \global\let\Microtype@Hook\fdrss@MicroType@Aliases
735 }{%
    \g@addto@macro\Microtype@Hook{\fdrss@Microtype@Aliases}%
736
738 \@ifundefined{DeclareMicroTypeAlias}{}{\fdrss@MicroType@Aliases}%
739 \ifx\@nodocument\relax
740 \endgroup
741 \fi
742 (/fontdef)
```

# 10 Font definition files

Using the above macros, the various FD files become simple two-liners.

```
